

Adaptive Sports Equipment Prosthetic's Criteria

Adaptive Sports equipment is based on the veteran's disability:
Paralysis of an extremity
Loss of use or loss of an extremity
Severe balance issues due to Neurological or Vestibular disorder

How to Get Involved

1. Have an interest in sports and recreation.
2. Request a consult from your primary care physician to:

RMS REC ADAPTIVE SPORTS

"Adaptive Sports has helped to give me more independence and a new way to get physical exercise that I never thought I was able to do"

Disabled Veteran

About the Program

Adaptive Sports & Recreation activities are a vital part of the continued rehabilitation process for disabled veterans.

Active participation in adaptive sports supports improvements in overall health, reduces risk of secondary medical complications, improves quality of life.

The program provides opportunities to learn adaptive skills and be oriented to adaptive equipment for a variety of sports.

Partnerships with local and national sporting organizations help to offer ongoing programs.

We assist with adaptive sports equipment for cycling, wheelchair sports, and other leisure pursuits based on the veteran's physical disability (loss of use or loss of an extremity, neurological disorder, Brain Injury with severe balance deficits and level of active participation).

Contact the Adaptive Sports Recreation Therapists for Criteria to request assistance with adaptive sports equipment.
